ADAPTIVE MANAGEMENT FORUM
May 4, 2023
#AMForum2023
In-person & Zoom attendance
CNRA Building (715 P Street, Sacramento, CA, 95814)

The Delta Science Program hosts the Adaptive Management Forum every two years to promote dialogue and information exchange related to adaptive management in the Sacramento-San Joaquin Delta.

The 2023 Forum will have a thematic focus on governance for adaptive management, with the aim of fostering learning and discussion around governance needs to support effective, equitable, and inclusive processes in the Delta.

Adaptive management provides a structured approach for adaptation in a context of rapid, often unprecedented, and unpredictable environmental change. Its success depends on support from the larger social, regulatory, and institutional context, or "governance system."

Watch for registration and an agenda to be released soon.

About the Tracker

The Delta Science Tracker is a tool to improve coordination and collaboration of science activities in a way that is valuable to scientists, decision-makers, and managers in the Delta. The Delta Science Tracker allows users to explore and visualize recent research and monitoring efforts through the lenses of science.

Science Communication Efforts

Delta Lead Scientist "Dear Colleagues"

Earth Day is all about how people interact with the planet; both how we impact it and how we can care for it. In celebration of Earth Week, this issue of the Delta Breeze highlights efforts at the Delta

Stewardship Council to better connect people to the science and management of the Sacramento- San Joaquin Delta. One of the first things that a student of any water class in California learns is that **it is impossible to divorce water from people here**. Probably more of us can recall the map of California's water infrastructure than that of its riverways. And the geography only scratches the surface. The Delta is often described as a "wicked problem," alluding to the high degree of uncertainty and
