

# What is Delta governance, anyway?

This three-part brown bag webinar series will foster discussion of the complex and multi-faceted governance of the Sacramento-San Joaquin Delta. Talks aim to increase awareness of and engagement with the social, political, and institutional dimensions of Delta science and management and examine institutional structures and processes that support effective and equitable environmental management.

## About the speakers:

This series will feature scientific and practitioner perspectives from academic scholars, representatives of federal, State, local, and Tribal governments, and representatives of collaborative partnerships with communities and NGOs. Panelists will speak to some of the main governance structures and arrangements in the Delta. Each webinar will focus on a different framework that can be used to understand Delta governance.
