

The Delta Science Program, Ecosystem Restoration Program & Surface Water Ambient Monitoring Program Jointly Present a Brown Bag Seminar Series

Toward a Common Framework for Compliance and Effectiveness Monitoring of Water Quality and Habitat Conservation Plans

Josh Collins

Chief Scientist, San Francisco Estuary Institute

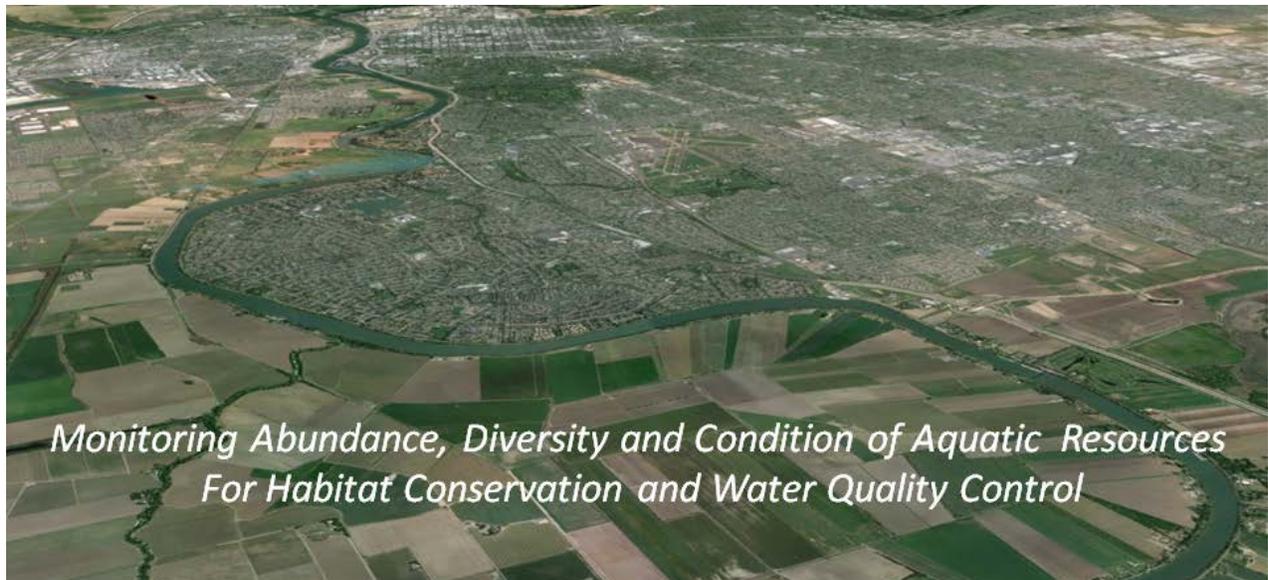

Monday, January 12, 2015

12:00 – 1:00 p.m.

Location: Park Tower Building

2nd Floor Conference Room

980 Ninth St - Sacramento, CA 95814

Common Approaches = Shared Benefits?

The current array of regulatory plans intended to protect Delta water quality and conserve wildlife habitat addresses many of the same aquatic and riparian resources albeit from different perspectives. The San Francisco Estuary Institute is working on a framework and toolset to assess compliance actions and the regulatory effectiveness of these separate and cumulative efforts at varying spatial and ecological scales. This presentation on monitoring abundance, diversity and condition of aquatic resources for habitat conservation and water quality control will demonstrate how a framework that emphasizes common assessment and reporting methods can support multiple objectives across the diverse Delta landscape.
