## PURPOSE

The purpose of the feasibility study is to meet a mandate in the Marine Invasive Species Act for the State Lands Commission to identify and conduct research about the means by which to reduce or eliminate a release or establishment of nonindigenous species by shipping vessels. On behalf of the Commission, the Delta Stewardship Council is organizing the preparation and independent review of the feasibility study of the potential use of shore-based ballast water reception and treatment facilities in California to meet California's interim performance standards for the discharge of ballast water (see Title 2 California Code of Regulations Section 2293). The study will culminate in the production of a report detailing the potential of this method to meet the needs of regulated vessels to comply with California's interim performance standards.

*"Coequal goals" means the two goals of providing a more reliable water supply for California and protecting, restoring, and enhancing the Delta ecosystem. The coequal goals shall be achieved in a manner that protects and enhances the unique cultural, recreational, natural resource, and agricultural values of the Delta as an evolving place."*
