

I live in Stcokton and am a dentist for 37 years--our estuary is nearly, irreversibly affected now because of many reasons---if we move fresh water down south as projected, the water ways and many business's will be gravely affected--it could make the San Joauquin area a "bust"--we must awaken common sense--there are too many people using such a small amount of "fresh" water--there has to be other solutions or this area will be permantly impaired.
