

ZOOPLANKTON ECOLOGY SYMPOSIUM

OCTOBER 27, 2020 | 1:00 - 5:00 PM OCTOBER 28, 2020 | 8:30 AM - 12:30 PM

The Delta Science Program invites you to attend a virtual symposium featuring the latest research on zooplankton ecology and monitoring. This symposium will span two consecutive half-days with talks and panel discussions focusing on the San Francisco Estuary, as well as work from other systems. The information shared will be aimed toward scientists, managers, and anyone interested in learning more about zooplankton.

Symposium talks will cover zooplankton biology and ecology, current monitoring programs, emerging methods for data collection, and the Interagency Ecological Program's integrated zooplankton dataset. There will be a panel discussion on data synthesis.

In support of its mission to provide unbiased, best possible science on issues critical to managing the Bay-Delta system, the Delta Science Program is organizing this symposium in collaboration with the California Department of Fish and Wildlife and the California Department of Water Resources through the Interagency Ecological Program.
